

## New three-in-one treatment available in 2010

From 1 January 2010 and for the cost of a single [PBS](#) [1][Pharmaceutical Benefits Scheme] The federal government program which subsidises medication costs in Australia. Anti-HIV drugs are part of a special part of the PBS called Section 100 (S100) which is used for expensive, highly specialised drugs. script, Australians will be able to access Atripla, the first HIV medication to combine three treatments in a single once-a-day tablet.

The new pill contains 300 mg tenofovir + 200mg emtricitabine + 600 mg efavirenz and will be available for those either starting treatment for the first time or changing from other HIV treatments.

'Combination pills such as these are a welcome addition to our [antiretroviral](#) [2]A medication or other substance which is active against retroviruses such as HIV. arsenal,' says Peter Canavan, Senior Coordinator of NAPWA's Health, Treatments and Research Unit.

'With new Australian research showing that more of us are living below the poverty line, its important that HIV treatment becomes more affordable,' he added.
