

## Clinical trials information

### PHIIDO - disease progression

This trial is **enrolling now**. Depending on eligibility and available places in your area, you may be able to enrol in this trial.

#### About this trial

The purpose of this study is to investigate the natural history of HIV from seroconversion and see how it affects the immune system. A group of people newly infected with HIV will be followed for two years.

There will be no interventions but participants' viral loads and CD4 counts will be assessed every three months .

#### Official title:

A prospective cohort study of individuals with primary Human Immunodeficiency Virus (HIV) infection to determine immunological and virological factors related to disease progression.

#### What is this trial studying?

other

#### Start date:

2009 (This may be the proposed or expected start date for trials which have not yet started.)
